Comp 199 Weekly Report Group 8

Week 8 (5/24 – 5/30)

Team Leader Toshiyasu Akazawa

Team Member Pasha Bolokhov, Candise/Xinlei Wang

1. Reference to Gantt chart

We worked along Gantt chart for week 7 and week 8, and we worked to implement functions for the website ("my trips" and "profile").

2. Summary

In the week, we worked for implementing 2 functions, remove items which customer wants to remove, and display and update customer profile. However, there may still be some problems in these problems, but we decided that we implement basic function (using PayPal API) first, and started to implement PayPal API to the website.

3. Problems and Solutions

For PayPal API, we have to decide some items: Return URL, Cancel URL, payment method, etc. Probably, the website need a page which implements PayPal button. Currently, the website has "My Trip" page to handle to products which customer select, and there are two buttons in the page, "Order" and "Remove." The "Order" button will be linked with the page which implements PayPal API. We will discuss about that.

4. Summary of the members' works for the week

This week, Candise and I worked for "My Trip" and "My Profile" pages. We found some problems in these pages. In "Profile", password was accepted when customer entered no password, but the information wasn't updated into the database. In "My Trip", remove function didn't work correctly. This week, we worked for dealing with these problems, and Pasha also helped to fixed them. And Candise prepared PayPal Sandbox accounts for the project.

5. Next Weeks' Tasks

Next week, first of all, we will discuss about the detail how to use PayPal API and what need for PayPal API. The page layout for return and cancel for PayPal (if we use more pages). We will have a meeting to share the information about PayPal API at the beginning of the next week.
